1. Scientists create hydrogel with snake venom to stop bleeding.

2. Applying PBM principles helps to personalize patient care.

3. Recent advocacy efforts focus on pathogen reduction interim language and reimbursement.

4. Gene identified as regulator of stem cell production.

5. Scientists generate blood vessel constructs.

6. Roche launches rapid HIV, hep C tests in Europe.

7. Mouse study finds red blood cell production can be induced through dendritic cells.
1. The impact on blood donor screening for human immunodeficiency virus, hepatitis C virus, and hepatitis B virus using plasma from frozen-thawed plasma preparation tubes.

2. Analysis of human platelet antigen-1 system alloantibodies using recombinant GPIIIa fragments coupled to Luminex beads.

5. Increasing nondonors' intention to give blood: addressing common barriers.

6. Fibrinogen and base excess levels as predictive markers of the need for massive blood transfusion after blunt trauma.

7. The strengths and limitations of animal models in assessing the effects of red blood cell storage age on clinical outcomes

8. The promise of extended donor antigen typing

9. Donor blood lead levels and transfusion safety in a vulnerable population
