1. Red blood cell storage affects the stability of cytosolic native protein complexes.

2. Supernatants from stored red blood cell (RBC) units, but not RBC-derived microvesicles, suppress monocyte function in vitro.

4. Implementation of a clinical decision support system improves compliance with restrictive transfusion policies in hematology patients.

5. Retrospective analysis of community hospital red blood cell recovery procedures: improved utilization needed for effectiveness.

6. Routine filtration of hematopoietic stem cell products: the time has arrived.

7. Validation of sterility testing of cord blood: challenges and results.

9. Efficacy of education as an intervention to reduce red blood cell utilization: the importance of a precise description of what is meant by “education”.

10. Assisted reproductive technology: an uncommon, but increasing, cause of parent-child ABO discrepancy.
